

# Pronto!

*The Portable & Secure Client for Today's Internet Communications*

## What is Pronto!?

The foundation of Internet Communications has always been integrated E-mail and Calendaring. However, the clients have never lived up to the demands of growth and have plagued IT departments; becoming the #1 headache for administrators. For years, most companies have lived with buggy, poor performing, and virus-prone client software, almost accepting this because of a lack of alternatives. This scenario has allowed risk into business with insecure and inefficient applications, and has cost the industry billions in lost productivity and time spent on upkeep.

Pronto! finally delivers the communication interface that your users will love to use, on a scalable, performance-driven application platform. Pronto! predictably scales and remains easy to deploy for millions of subscribers at mobile, broadband, and cable carriers. Pronto! with CommuniGate Pro delivers an Internet Communications solution with rolling updates and 99.999% uptime, using a secure and consistent server-based delivery, all with the lowest possible TCO.

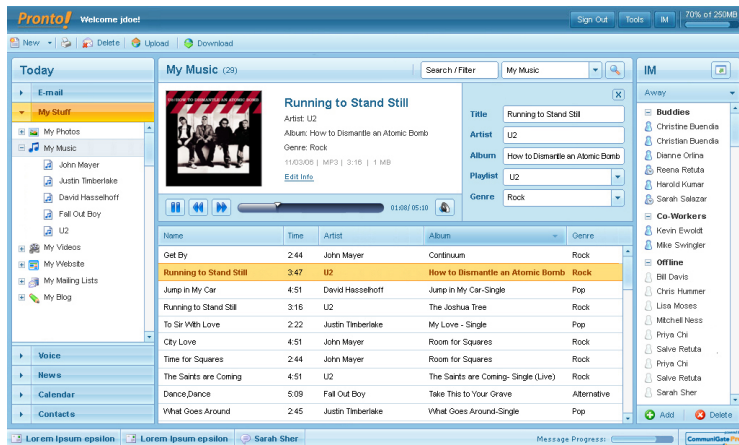

## MAIN FEATURES

**Security** - core to the design of Pronto! is security. It runs as a binary in memory space, not the browser cache, and it avoids the flaws of scripts that paint the page with vulnerable holes.

**Speed and size** - Pronto! is less than 400k in size, and uses the CommuniGate Pro XIMSS (XML Interface for Messaging, Scheduling, and Signaling) API. Using lightweight XML requests to the server increases speed with no middle-ware or heavy protocols; fully clustered and scales to millions of subs. Design and extensibility of XIMSS is open and powerful allowing any type of UI, Portal, Cable or set top box integration or even external application touch points without any requirement to use protocols like SIP or IMAP.

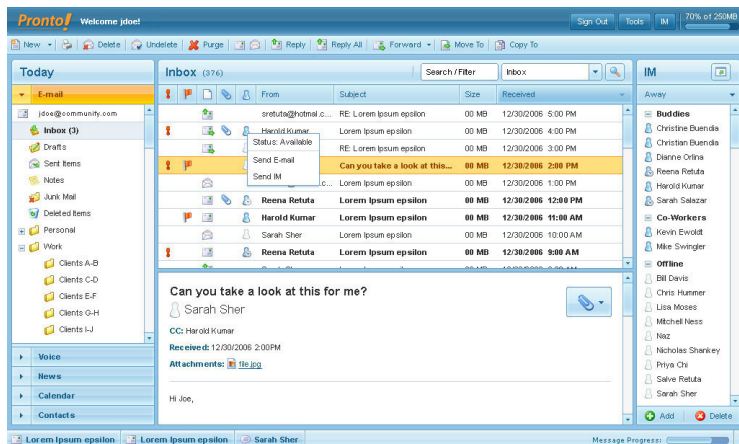

**Portability** - for any OSX, Windows or Linux browser using Flash9, with mobile capabilities and versions being added shortly.

**Fluid and dynamic feel** - intuitive, elegant, sleek design...advanced collaboration with drag & drop features from any web access point. Pronto! provides next generation full Internet Communications with VoIP and IM today.

Pronto! delivers all your business communications in one secure and fast client. Increase productivity, reduce administrative costs and benefit from a secure client where viruses and bugs are issues of the past.

Pronto! is available with CommuniGate Pro Ver5.1.
